### **EXPERIMENT**

**Title** 

ELECTIONS

**Description** 

You are the head of the election committee in your village. Each Political party is associated with a unique number and the votes are represented as an integer array A. where each element contains the party number voted for by the villagers. For a party to win, they must have a majority of votes. our task is to find and return an integer value denoting the winning party's number. Return -1 if there is no party with a majority.

Note: If only one vote is there he is the winner.

#### **Input Format:**

**input1:** An integer value representing the number the number of voters

**input2:** An integer array A representing the votes of the voters.

#### output Format:

Return an integer value denoting the winning party's number.Return -1 there is no party with a majority

#### **Example 1:**

Input:

6

112223

**Output:** 

2

#### **Explanation:**

As 2 got the most number of votes i.e 3.

#### Example 2:

Input:

6

121122

#### **Output:**

-1

#### **Explanation:**

9/27/24, 8:10 PM 3BR23CA076-Elections

As both the contestants got same votes there is no majority.

#### **Source Code:**

```
n=int(input())
arr=list(map(int,input().split()))
d={}
if n==1:
    print(arr[0])
else:
   for i in arr:
       if i not in d:
           d[i]=1
       else:
           d[i]+=1
   x=sorted(d.items(),key=lambda x:x[1],reverse=True)
   if x[0][1]==x[1][1]:
       print(-1)
   else:
       print(x[0][0])
                                                                                                        28R23CA0T638
```
